DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jerome Massie on 1/20/2004.

In claim 1, A semiconductor laser device comprising; a first cladding layer, which is made of a nitride semiconductor of a first conductivity type and is formed over substrate; an active layer, which is made of $\text{In}_y\text{Ga}_{1-y}\text{N}$ and is formed over the first cladding layer; a second cladding layer, which is made of still another nitride semiconductor of a second conductivity type and is formed over the active; and an spontaneous-emission-absorbing layer, which is made of still another nitride semiconductor of the first conductivity type and has and energy gap as absorbing-spontaneous emission layer, for emission from the active layer, is formed between the substrate and the first cladding layer, an $\text{In}_x\text{Ga}_{1-x}\text{N}$ of the first conductivity type is formed

between the substrate and the first cladding layer, wherein $0 < x < 1$, $0 < y < 1$ and $x > y$ in the composition of In.

In claim 4, A semiconductor laser device comprising; a first cladding layer, which is made of a nitride semiconductor of a first conductivity type and is formed over substrate; an active layer, which is made of $\text{In}_y\text{Ga}_{1-y}\text{N}$ and is formed over the first cladding layer; a second cladding layer, which is made of still another nitride semiconductor of a second conductivity type and is formed over the active; an electrode formed over the second cladding layer, and an spontaneous-emission-absorbing layer, which is made of still another nitride semiconductor of the first conductivity type and has and energy gap as absorbing-spontaneous emission layer, for emission from the active layer, is formed between the substrate and the first cladding layer, an $\text{In}_x\text{Ga}_{1-x}\text{N}$ of the first conductivity type is formed between the second cladding layer and electrode, wherein $0 < x < 1$, $0 < y < 1$ and $x > y$ in the composition of In.

Cancel claims 7 – 30.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: claim 1 has been allowed over the prior art because they fail to teach a semiconductor laser device

comprising; a first cladding layer, which is made of a nitride semiconductor of a first conductivity type and is formed over substrate; an active layer, which is made of $\text{In}_y\text{Ga}_{1-y}\text{N}$ and is formed over the first cladding layer; a second cladding layer, which is made of still another nitride semiconductor of a second conductivity type and is formed over the active; **and an spontaneous-emission-absorbing layer, which is made of still another nitride semiconductor of the first conductivity type and has an energy gap as an absorbing-spontaneous emission layer, for emission from the active layer, is formed between the substrate and the first cladding layer, an $\text{In}_x\text{Ga}_{1-x}\text{N}$ of the first conductivity type is formed between the substrate and the first cladding layer, wherein $0 < x < 1$, $0 < y < 1$ and $x > y$ in the composition of In.**

Claim 2 – 3 has been found allowable due to their dependency on claim 1.

The following is an examiner's statement of reasons for allowance: claim 4 has been allowed over the prior art because they fail to teach a semiconductor laser device comprising; a first cladding layer, which is made of a nitride semiconductor of a first conductivity type and is formed over substrate; an active layer, which is made of $\text{In}_y\text{Ga}_{1-y}\text{N}$ and is formed over the first cladding layer; a second cladding layer, which is made of still another nitride semiconductor of a second conductivity type and is formed over the

active; an electrode formed over the second cladding layer, and **an spontaneous-emission-absorbing layer, which is made of still another nitride semiconductor of the first conductivity type and has an energy gap as absorbing-spontaneous emission layer, for emission from the active layer, is formed between the substrate and the first cladding layer, an $\text{In}_x\text{Ga}_{1-x}\text{N}$ of the first conductivity type is formed between the second cladding layer and electrode, wherein $0 < x < 1$, $0 < y < 1$ and $x > y$ in the composition of In.**

Claims 5 – 6 has been found allowable due to their dependency on claim 4.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reason for Allowance".
